

CapaDrivers

Version 1.0

DESCRIPTION

CapaDrivers makes it easy to both install drivers on new computers and update these on existing ones. The service supports more than 90% of the hardware models of selected vendors aged 5 years or less.

You no longer need to download and integrate driver packages from the manufacturers yourself when your company gets new models of hardware.

Updated drivers not only significantly raise the level of security, but also improve the functionality and performance of your computers.

ADVANTAGES

- Quick and easy integration of new hardware models
- No need for vendor-specific driver update software
- Option to run a check which computer models are supported by CapaDrivers prior to updating
- Logging of changes to ensure easier troubleshooting
- Identical driver versions of identical hardware, which make troubleshooting easier
- Continuous updating of driver content packages
- Access to specialist support at no extra charge.

CAPASERVICES

CapaServices are standard solutions that adds value to your CapaInstaller environment. The solutions are developed and maintained by CapaFactory Team and are fully supported by CapaSystems Customer Services at no extra cost.

CapaDrivers

Version 1.0

THIS IS HOW IT WORKS

At CapaSystems, we have developed an “engine” that continuously scans for the latest driver packages from Lenovo, Dell, HP and Microsoft.

The driver packages from the manufacturers are downloaded and converted into driver content packages, which are automatically exported to CapaOne Portal.

The portal makes it possible to easily download and import the driver content packages that are relevant for you.

CapaDrivers automatically matches your computer models with the corresponding driver content package before the driver update starts.

Once the driver update is complete, the solution logs which drivers are updated.

“We make sure our drivers are always up to date — this patches up vital security flaws, ensures stability and provides far better performance.”

“Many drivers come with the Windows version. Our experience is that our computers get sluggish and unstable if we do not update their drivers after updating Windows.”
