

CapaPacks for CapaInstaller

Version 1.0

DESCRIPTION

Preparing downloaded software for deployment can be timeconsuming.

Because it is impossible to predict when vendors will release new versions, updates or patches, many customers find that their software is not always fully up-to-date.

CapaPacks gives you access to downloading pre-prepared software packages whenever a vendor releases a new version, update or patch.

Packages are created and thoroughly tested by experienced CapaSystems consultants who know and understand the needs of end-users as well as CapaInstaller administrators.

As of CapaInstaller v. 5.7, customers with CapaPacks will have the service directly integrated into the console.

ADVANTAGES

- Be sure that your standard software has all necessary security updates.
- Save time and resources on packaging of downloaded software.
- Improve control of your installed standard software versions.
- Get all the benefits of CapaInstaller, such as log-based
- Get all the benefits of CapaInstaller, such as log-based error handling.
- Feel confident that all user settings are taken care of.
- Free support

With CapaPacks you can skip the daily monitoring for new versions, security updates and patches for standard software, and you can completely avoid the time-consuming task of preparing downloaded software for deployment.
